

CUSTOM-GROWN PLANTS...

the just-right fit for your project

What do you get when you combine local-origin seed with Forrest Keeling's RPM technology? The right plants for your projects in the sizes you need from Step-2 RPM seedling to 20-gallon size.

Seed and plant inventories can change due to natural events or market demand. But, custom-grown orders **lock in the specific plants you need** at the best size for your project's site. With custom-grown, it's **easy and affordable** to execute your installations better.

Sure, any grower could give you custom-grown. But, Forrest Keeling gives you the added advantage of our patented **RPM (root-production method)**. RPM is **scientifically proven to deliver improved vitality and faster growth through the life of the plant**. Even in the plug stage, a Forrest Keeling RPM- produced plant demonstrates substantially more root development. So, while some just see roots, we see performance, which means greater survivability and results. And, saves you time and money!

Forrest Keeling is the industry's **premier provider for native plants and trees**. Over 90% of our total production is in native species. We produce and market **380 plant varieties**. This includes 273 trees and shrubs species and 107 perennials.

But, **custom grown plants are also a Forrest Keeling specialty**. We'll grow plants from local-source seed you provide using our patented RPM technology. If you prefer, we can use seed from our seed orchards, or sourced through our network of seed collectors. Shipping is easy and affordable with our central U.S. location. We send plants anywhere in the lower 48 states, Canada and approved global markets.

Forrest Keeling's custom grown specimens are a natural choice for any landscape project.
